

Information About the Service

Pentanet provides access to the nbn™. The nbn™ is a high-performance network servicing Australia which uses FTTP, FTTB, FTTN, FTTC or HFC technology to deliver internet connectivity to the network boundary point of your premises.

Availability

nbn™ service availability depends on whether the nbn™ has been rolled-out to your premises. nbn™ availability can be checked online using the [Pentanet nbn™ Checker](#). This service does not depend on a bundling arrangement with other telecommunications services.

Requirements

You will require a nbn™ ready modem/router to facilitate connectivity. You are welcome to provide your own, however It's important for you to know that if you bring your own, we can't provide technical support for it. For more information regarding modem/router requirements visit our FAQ [here](#).

Speeds

FTTN & FTTB speeds are subject to the quality of the infrastructure not operated by Pentanet. Actual speeds to be confirmed once the service is active. Actual speeds vary due to many factors such as:

- 🏠 Set up at your premises (such as modem/router location and/or internal wiring);
- 🏠 The number of individual users at the premises using the service at the same time;
- 🏠 The type of technology available at your address
- 🏠 Hardware and software configuration;
- 🏠 Whether your device is connected by Wi-Fi rather than Ethernet cable;
- 🏠 The type/source of content being downloaded (including any content server limitations);
- 🏠 Limitations of network devices, mobile devices, consoles, computers, cables and other devices that you use;
- 🏠 Current local nbn™ traffic

If your monthly plan does not include unlimited data and you exceed the monthly data allowance, your speed will be shaped to 1Mbps/1Mbps until the next billing cycle. This applies to both the on-peak and off-peak time frames. Keep in mind that once shaped, some applications may be unavailable or severely disrupted. No additional charges will apply for excess data usage.
